CLASE 1

## R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

## Primeros comandos de R

R es un lenguaje muy parecido a MATLAB y trabaja normalmente con variables que pueden ser matrices

```
A<-49
B=sqrt(2500)
B
```

```
## [1] 50
```

```
C=B-A
C
```

```
## [1] 1
```

```
summary(cars)
```

```
##      speed           dist       
##  Min.   : 4.0   Min.   :  2.00  
##  1st Qu.:12.0   1st Qu.: 26.00  
##  Median :15.0   Median : 36.00  
##  Mean   :15.4   Mean   : 42.98  
##  3rd Qu.:19.0   3rd Qu.: 56.00  
##  Max.   :25.0   Max.   :120.00  
```

## Uso de data sets (bases de datos) en R

Escribiendo data() en **"Console"**, se abrirá una pestaña contigua titulada "R data sets", compuesta de una serie de ítems que contienen distintas series de datos. Por ejemplo, de la efectividad de un repelente o de accidentes automovilísticos en Gran Bretaña entre los años 1969 y 1984. Para desplegar los datos, ingresamos el título del data set en la consola. De ser una base de datos con más de una variable, el signo $ a continuación del título.

## Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

## Explicación del comando plot

Mediante el comando (en lenguaje de programación R) es posible graficar la información de los data sets insertando "chunks" de código en R y escribiendo plot(título del data set). Escribiendo en la consola **?plot** se puede indagar sobre las diversas modificaciones al gráfico, ingresadas luego de una coma después del título del data set. En caso de ser texto, se escribe entre comillas dobles.

### Nivel del lago Huron a lo largo del tiempo

### Funciones estadísticas

```
z1<-rnorm(350,22,5)
z1
```

```

```

## Ejercicio 2

Calcular la suma de todos los valores del vector Secuencia_dni

```
Total<-0
Valor_final<-length(Secuencia_dni)
for (i in 1:Valor_final) {
Total<-Total+i
}
Total
```

```
## [1] 105111
```

## Ejercicio 3

Repetir el ejerciio anterior pero en Python

```
suma = 0

for i in range(1, 448):
    suma += i

print(suma)
```

```
## 100128
```

## Ejercicio 4

¿Cuánto tarda en correr el código del ejercicio 2?

```
inicio<-Sys.time()
Total<-0
Valor_final<-1000000*length(Secuencia_dni)
for (i in 1:Valor_final) {
Total<-Total+i
}
Total
```

```
## [1] 1.04882e+17
```

```
final<-Sys.time()
final-inicio
```

```
## Time difference of 7.047384 secs
```

## Ejercicio 5

Repetir el ejercicio anterior utilizando la cabeza de Gauss

```r
Valor_final <- length(Secuencia_dni)
Total <- Valor_final * (Valor_final + 1) / 2
Total
```

```
## [1] 105111
```

### Ejercicio 6 : Construir serie de Fibonacci

```r
n <- 10
fibo <- numeric(n)
fibo[1] <- 0
fibo[2] <- 1
for (i in 3:n) {
  fibo[i] <- fibo[i-1] + fibo[i-2]
}
fibo
```

```
##  [1]  0  1  1  2  3  5  8 13 21 34
```

### Ejercicio 7 : Definición matemática recurrente

```r
fibo <- c(0, 1)

for (i in 2:6) {
  fibo[i+1] <- fibo[i] + fibo[i-1]
  print(fibo)
  print(length(fibo))
}
```

```
## [1] 0 1 1
## [1] 3
## [1] 0 1 1 2
## [1] 4
## [1] 0 1 1 2 3
## [1] 5
## [1] 0 1 1 2 3 5
## [1] 6
## [1] 0 1 1 2 3 5 8
## [1] 7
```

### Ejercicio 8: La penitencia de Newton

### R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```r
summary(cars)
```

```
##      speed           dist
##  Min.   : 4.0   Min.   :  2.00
```

```
##  1st Qu.:12.0   1st Qu.: 26.00
##  Median :15.0   Median : 36.00
##  Mean   :15.4   Mean   : 42.98
##  3rd Qu.:19.0   3rd Qu.: 56.00
##  Max.   :25.0   Max.   :120.00
```

### Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
